Summary

Financial economist and researcher with 15 years of experience building models of pricing, strategic behavior, and information asymmetry in markets. PhD in Finance from UC Berkeley. Published 6 peer-reviewed papers (300+ citations) in leading economics and finance journals. Strong technical foundation in probability theory, stochastic processes, game theory, econometrics, and asset pricing. Experienced communicator who has presented complex quantitative work to expert audiences at 70+ international venues and taught 1,000+ students.

Skills

Programming Languages: Python, SQL

Tools & Software: Pandas, NumPy, scikit-learn, statsmodels, Git, Jupyter, LaTeX

Mathematical & Statistical Methods: Probability theory, stochastic processes, statistical inference, causal inference, time series analysis, econometrics, game theory, optimization

Domain Expertise: Pricing and market dynamics, information asymmetry, strategic decision-making, financial markets

Experience

UC San Diego, Rady School of Management, Assistant Professor of Finance

La Jolla, CA

July 2016 – Aug 2025

9 years 2 months

- Built models analyzing how prices form in markets where participants hold private information and act strategically, with applications to pricing dynamics, information acquisition, and firm investment decisions (5 publications in peer-reviewed journals including Journal of Finance, Review of Financial Studies, and Journal of Financial Economics)
- Research contributions included: modeling how market participants strategically decide when and how much to invest in acquiring private information, analyzing how voluntary disclosure of information reshapes agent behavior and price efficiency, and showing how feedback between market prices and real investment decisions affects firm behavior
- Designed and delivered 2 advanced graduate courses (Corporate Finance, Derivatives & Structured Finance) for quantitative finance program, developing all curriculum and integrating ~10 business case studies per course. Taught to ~1000 students over 9 years
- Presented at 30+ international conferences and universities, communicating complex quantitative research to expert audiences and engaging in live Q&A

Stanford University, Graduate School of Business, Assistant Professor of Finance

Stanford, CA

July 2011 – June 2016

5 years

- Developed a novel mathematical framework for analyzing equilibrium pricing in markets with asymmetrically informed participants, extending standard linear models to accommodate richer nonlinear settings (solo-authored publication in Review of Economic Studies, ~5% acceptance rate)
- Designed and delivered rigorous finance theory course for PhD students, covering advanced asset pricing, information economics, and market microstructure
- Delivered case-based core finance course to 400+ MBA students over 5 years, adapting complex quantitative concepts for business-focused audience

Education

PhD, UC Berkeley, Finance

Berkeley, CA

MS Advanced graduate coursework in economics, finance, and mathematics: stochastic processes, probability theory, real analysis, measure theory, topology, functional analysis, partial differential equations, econometrics, causal inference, microeconomic theory, game theory, asset pricing, market microstructure.

- Outstanding Graduate Student Instructor Award
- Dean Witter Foundation Fellowship

BBA University of Iowa, Finance, Statistics (minor)
• Graduated with Honors and Highest Distinction

Iowa City, IA

Technical Training

City College of San Francisco, Computer Science (non-degree coursework)

San Francisco, CA

Completed comprehensive coursework in computer science and software engineering.

- Core topics: data structures and algorithms, databases, object-oriented programming, computer architecture, Unix/Linux systems
- Programming languages: Python, SQL, C++, Java

Publications and Presentations

6 publications in leading finance and economics journals (Review of Economic Studies, Journal of Finance, Review of Financial Studies, Journal of Financial Economics, Journal of Economic Theory)

300+ citations (Google Scholar)

70+ presentations at leading international conferences and universities, including invited talks and paper discussions
